

Linearis: the new compact, dynamic speed pneumatic conveyor

New - Discover LINEARIS

Linearis is the new and exclusive compact pneumatic conveyor **with real-time variable speed**: the solution for loading tablets or capsules at the speed and quantity required by your blister machine.

Linearis easily adapts to low-ceiling spaces and is designed to transport capsules and tablets inside blister machines.

Linearis also includes a loading hopper that adapts to any product size and weight, and the entire system allows for dust removal from even the dustiest tablets.

A completely new system capable of adding value to your production process.

Where form follows function, efficiency is born

FR Sistemi presents Linearis, the next-generation pneumatic conveyor, one of the most compact ever, suitable for transporting tablets or capsules on blister machines. It adapts to the speed of the blister machines and maintains excellent hygiene and sanitation standards.

Linearis uses an extremely efficient suction system to collect tablets, capsules or caplets from the loading hopper and then transfers the material directly to the packaging line (blistering machine): no interruptions, damage to tablets, need to move loads or other need for manual intervention.

One of a kind, it is designed for Industry 4.0 with digital control and real-time monitoring, and finds wide application in pharmaceutical, nutraceutical, cosmetic and food production.

From aspiration to blister without manual intervention

Linearis features offer unprecedented advantages:

- Compactness: the dimensions of the hopper allow it to be placed even in departments with low ceilings
- Hygiene: allows for very quick cleaning when changing products
- Flexible: allows for quick calibration for different tablet formats
- Dust abatement: filtration and cleaning for "dusty" tablets
- High automation: choice of format type via panel to set the suction and extraction speed by the vibrating channel in the loading hopper

LINEARIS consente una produzione continua e lineare, si adatta alla velocità della blisteratrice; può trasportare 10.000 compresse in 5 minuti o altre quantità in altri tempi semplicemente agendo sul pannello.

The LINEARIS features don't end there: contact us to schedule an on-site inspection with one of our technicians. You'll discover how LINEARIS can be easily adapted to your line, how easy it is to install, and how easy it is to adapt to the features of your blister machine.

Avoid manual operations and move to a new level of automation.
